

Insight 3.6.4: Release Date June 3, 2016		
Internal TFS #	Service Now # (if Available)	Description
Humans		
53481		A fix to correct the 'Add Submitter to Staff' button on the staff grid. Prior to this fix, once a user was added using this function and removed, they were unable to be added again. There was also an upgrade to this function to now be labeled as 'Add yourself to staff' which will add whichever username is logged in at the time the button is clicked.
53484		Fix to ensure the user is unable to make PI changes unless explicitly stated in the Amendment form
53817		Improvement to allow staff roles to be updated within a process without having to remove and re-add them.
53821		Improvement to allow staff institutional information to be updated from 'Partners' at the point of addition to the study. This improvement will reduce the time it take to complete an application as there will be no downtime between adding a user and having their institutional information updated.
53830		Fix to ensure only users with the proper access rights are able to upload review letters on the protocol details page.
53909		Fix to ensure Submitters can't give themselves 'View' permissions upon initial application as they were essentially locking themselves out of the protocol and could not reaccess it
54318		Improvement to usability where the submitter will simply need to state whether or not they are completing a Staff amendment and whether or not it affect the PI. Other than those two disclosures, there is no longer a need to indicate whether you are adding or removing staff.
54319		Improvement to ensure Submitters can't remove themselves from a Work-In-Progress submission and orphan that process due to no other staff members having access
54381		McLean Pharmacy email address update to PHSMcLeanRschPcy@partners.org
54440		Fix to workflow to allow a New PI to reject a signoff activity and have the submission return to the submitter rather than end
54991		Infrastructure updates to allow the system to track all iterations of a protocols. These improvements were brought into the current Insight application to allow the transition into Insight 4.0 to be seamless.
52283		Additional attachment infrastructure improvement to support versioning of protocol information
55363		Production server log error isolated to workflow
48260		Fix to a specific workflow around Site Pis
48856		Updates to the CITI Certification Notification process. This was an improvement slated for Insight 4.0, but it was brought into the current application for early adoption efforts.
56420		Fix to ensure required attachments are still being triggered beyond the initial form requirement. When the user added a second form, the attachment was no longer triggering another attachment as being required.
56543		Additional improvements to the CITI Certification Notification process. This new improvement has more notification methods such as, a notification at submission of a process, list of staff on the 30/60/90 CR notifications
58425	INC0593925	Fix within the CR process as a user who selected a different CR form than the one that was defaulted for them, was not seeing the newly selected form. The system improvement now pulls through the selected CR form.
58664	INC0465875	Fix for an error that was being thrown when trying to generate a Review Letter. This issue was isolated to a single instance within the application.
56012	INC0507645	Root cause and mass update fix for an error that was being thrown due to non-numeric characters being entered into numeric character only fields
53952		A complete staff process improvement
Animals		
48952		OCC Health Certification Expiration Notification- Users will be able to receive OCC Health notifications for NHP and Standard OCC Health. To turn the process on, IACUC will need to provide a standard language for the current 3.6. system. As of now, it is turned off.
55500		BWH IACUC- Add the ability to display the legacy number for BWH protocols when entered in the Initial Survey.
56429		BWH IACUC- Add Tumor BWH form was added as part of the 3.6.4 release.
57617		New version of the Amendment form has been added to remove the questions for Adding/Removing study staff. Users will only need to indicate if the amendment is a study staff amendment or not.
59321		Board Actions were occasionally unlocking when resubmitting. This fix ensures Board Actions stay locked once the Send Action Letter is clicked.
59420		A bug was discovered when testing that resulted in the Tissue Ancillary board not triggering if other special consideration were chosen. For example, if Breeding and Tumor were checked off, Tissue ancillary workflow would not generate. This was due to the system validating special considerations for triggers by alphabetical order. The system would only check the first special consideration. So, if both are checked off, the trigger would not happen for tissue. This has been resolved as part of 3.6.4.
59461		As part of the Study Staff overhaul, Study Staff Amendments were not checking modified staff to determine if they were CITI certified. Initially, CITI would only check for added staff. Now, CITI will check for staff being modified. (I.e. role modification from Administrator to Research Technician).
53481		A fix to correct the 'Add Submitter to Staff' button on the staff grid. Prior to this fix, once a user was added using this function and removed, they were unable to be added again. There was also an upgrade to this function to now be labeled as 'Add yourself to staff' which will add whichever username is logged in at the time the button is clicked.
53817		Improvement to allow staff roles to be updated within a process without having to remove and re-add them.
53909		Fix to ensure Submitters can't give themselves 'View' permissions upon initial application as they were essentially locking themselves out of the protocol and could not reaccess it
54319		Improvement to ensure Submitters can't remove themselves from a Work-In-Progress submission and orphan that process due to no other staff members having access
54991		Infrastructure updates to allow the system to track all iterations of a protocols. These improvements were brought into the current Insight application to allow the transition into Insight 4.0 to be seamless.
52283		Additional attachment infrastructure improvement to support versioning of protocol information
53952		A complete staff process improvement
BioSafety		
56874		The use of rDNA form was not displaying correctly in IE11. This bug fix has resolved that issue. Users can now see all questions related to Use of rDNA when using IE11
57709		The Five Year Resubmission form update has been added to allow users to close out a registration if needed.
58522		Bug fix issue preventing PI's from submitting a declined submission has been fixed. Initially, PI's had to rely on the Study Staff members to resubmit.
53481		A fix to correct the 'Add Submitter to Staff' button on the staff grid. Prior to this fix, once a user was added using this function and removed, they were unable to be added again. There was also an upgrade to this function to now be labeled as 'Add yourself to staff' which will add whichever username is logged in at the time the button is clicked.
53817		Improvement to allow staff roles to be updated within a process without having to remove and re-add them.
53909		Fix to ensure Submitters can't give themselves 'View' permissions upon initial application as they were essentially locking themselves out of the protocol and could not reaccess it
54319		Improvement to ensure Submitters can't remove themselves from a Work-In-Progress submission and orphan that process due to no other staff members having access
54991		Infrastructure updates to allow the system to track all iterations of a protocols. These improvements were brought into the current Insight application to allow the transition into Insight 4.0 to be seamless.
52283		Additional attachment infrastructure improvement to support versioning of protocol information
53952		A complete staff process improvement
Meetings Management		
52424		Version Date/Version Name within Meeting Minutes will now retain the Version Date/Version Name of the protocol at the time of the review, rather than pulling the most current information from the protocol when the minutes are run
58054		Infrastructure improvement to allow all protocol information to be captured in a 'snapshot' when the 'Finalize and Send' button is clicked
